

RTSC Ease of Use: status & recommendations

- Status
 - XGCONF in a usable state and continues to improve
 - Capable of editing/deleting text as you edit/delete objects unlike tconf
 - Work continues to provide user defined “views” of the content
 - Platform wizard is available and easy to use
 - Separate “config projects” to isolate RTSC configuration and improve control of build
 - Path tool for diagnosing path related issues
 - Bug filed to make it easier to launch, e.g. copy/paste THIS to a command line for path diagnosis utility.
 - Bug filed for –qq option in configuro so that it doesn’t spew out so much data
- Recommendations
 - XGCONF could improve with on-the-fly parameter validation
 - Error utility for CCS such that you can double-click an error and have it automatically launch the path tool or give you extra help on what an error means
 - Legacy library wrapping wizard
 - Continue to focus on ease of use (NO CORE FEATURES!)
