Free Software Movement

- Launched 1983
- GNU project, FSF
- Copyleft - GNU Public License (GPL)
- Ethics based
- Protect the 4 rights of the end-user (use, investigate, modify, distribute)

Richard Stallman, Wikipedia

Open Source Software

- 1997 - Cathedral and Bazaar
- 1998 - Netscape code becomes Mozilla
- 1998 - Open Source Initiative
- pragmatic approach to solving software problems
- Free as in free beer

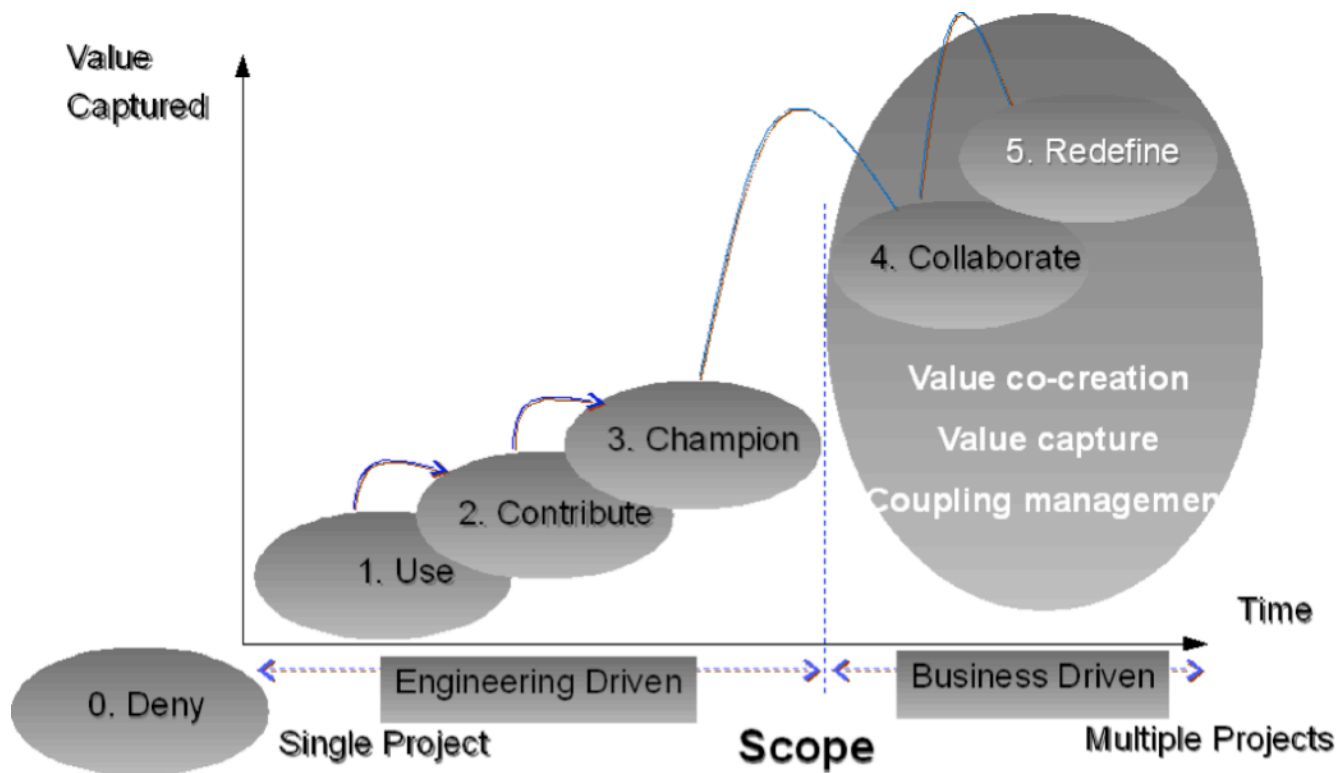

Eric S. Raymond, Wikipedia

The 10 Commandments

1. Free redistribution
2. Include source code
3. Modifications and derived works
4. Integrity of author's source code
5. No discrimination against person and groups
6. No discrimination against fields of endeavors
7. Distribution of license
8. License not specific to a product
9. License not restricting other software

Open Source and Business

The Eclipse Foundation

- > Independent, not-for profit
- > Founded in 2004, IBM e.a.
- > Industry consortium of the software industry
- > Initial goals: build the ubiquitous tooling platform for the Java developer community
- > Eclipse Foundation Europe GmbH 2013

Strategic Focus Areas

Cloud Native Java

We provide a collaborative environment for the world's leading Java ecosystem players to advance open source enterprise Java technologies for the cloud.

IoT & Edge

We enable industry leaders to collaborate on an end-to-end IoT architecture that is secure, flexible, and fully based on open source and open standards.

Automotive

We provide leading automotive OEMs, their suppliers, and partners with a sustainable, transparent, and vendor-neutral platform to collaborate on open technologies and standards.

Tools

The Eclipse IDE is the critical development environment for more than 4 million active users. Our community is innovating on the next generation of cloud native developer tools.

Validated by Industry Leaders

“No company can realize the IoT on its own... Within the Eclipse Community, through the contribution of many IoT developers, tools and standards are created on an open platform that many companies can benefit from for their IoT applications.”

Stefan Ferber

Elinor Ostrom (born **Elinor Claire Awan** August 7, 1933 – June 12, 2012) was an American [political economist](#).

She was awarded the 2009 [Sveriges Riksbank Prize in Economic Sciences in Memory of Alfred Nobel](#), which she shared with [Oliver E. Williamson](#), for "her analysis of economic governance, especially [the commons](#)".

She was the first, and to date, the only woman to win the prize in this category. Her work was associated with the [new institutional economics](#) and the resurgence of [political economy](#).

Design Principles for CPR Institutions

Ostrom identified eight "design principles" of stable local common pool resource management:

1. **Clearly defined boundaries** (effective exclusion of external un-entitled parties);
2. **Rules regarding the appropriation and provision** of common resources that are adapted to local conditions;
3. **Collective-choice arrangements** that allow most resource appropriators to participate in the decision-making process;
4. **Effective monitoring** by monitors who are part of or accountable to the appropriators;
5. A scale of **graduated sanctions** for resource appropriators who violate community rules;
6. **Mechanisms of conflict resolution** that are cheap and of easy access;
7. **Self-determination of the community** recognized by higher-level authorities;
8. In the case of larger common-pool resources, **organization in the form of multiple layers of nested enterprises, with small local CPRs at the base level.**

Eclipse in Motion

Tools and systems for the **standardized** management of measurement data

Frameworks and modules for simulating **advanced driver assistance systems** and partially automated driving functions

Framework for the detailed simulation of the **movement of vehicles, people, and their communications**

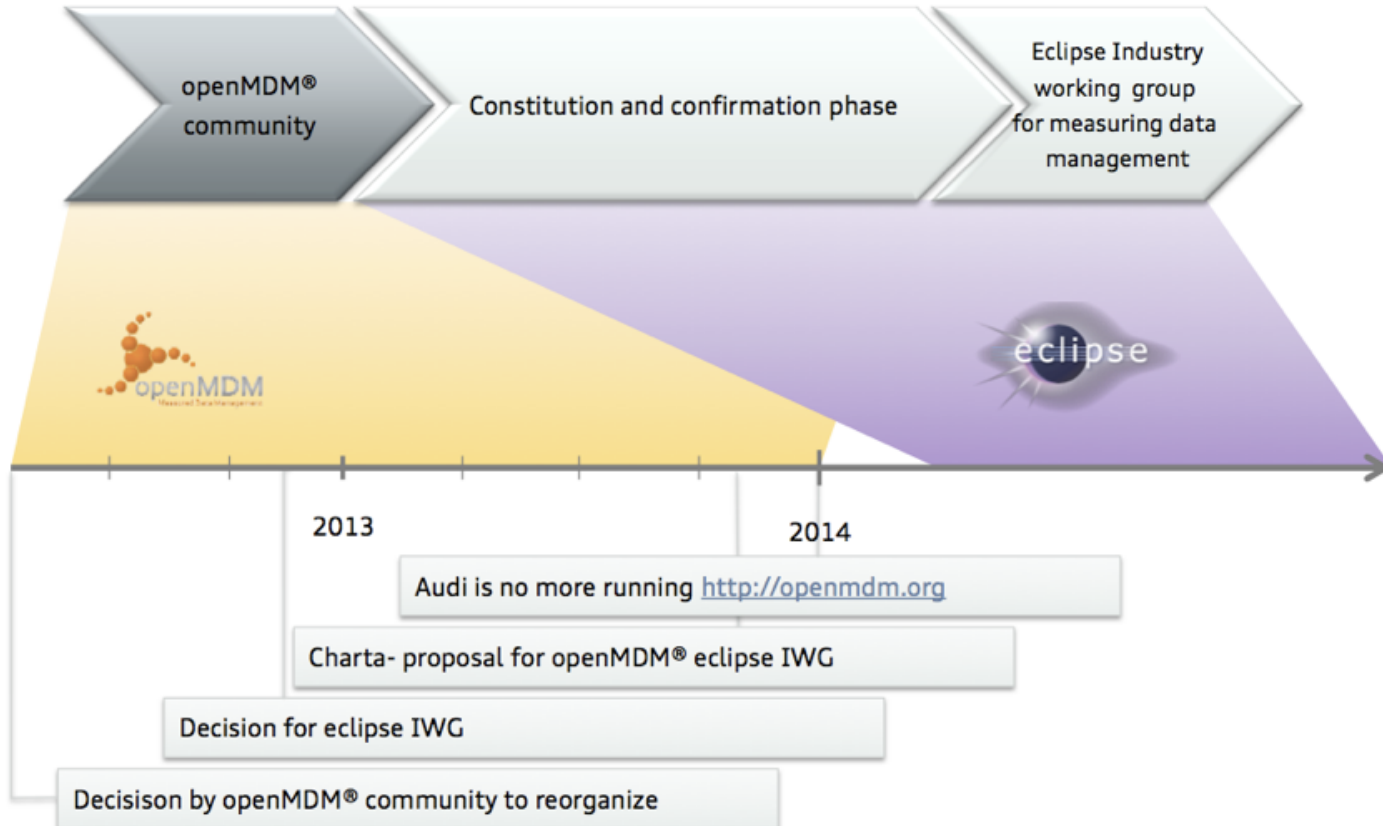

Accelerating **Automated Driving (AD) tool chain** development through open collaboration.

openGenesis

Methods and tools for the assessment of **artificial intelligence (AI)** used for autonomous driving

openMDM: From Inhouse to OSS

openMDM

- > Building an open source, vendor-independent, and server-based application for the management of ASAM ODS compliant measurement data
- > Investigate future needs (e.g., big data) and fields of application (e.g., autonomous driving)

Project Proposal:
Eclipse Cloe

openGENESIS

- > Drive and support the investigation of a verifiable, understandable and certifiable artificial intelligence (AI) used for autonomous driving
- > Support a global collaboration and drive a common understanding of quality of AI
- > Establish an open accessible platform for AI training and validation data sets
- > Supply public / regulation authorities with necessary approaches to deal with the challenges of approval and certification of AI

Eclipse APP4MC

The screenshot displays the Eclipse APP4MC tool interface. At the top left, the Eclipse logo is followed by the text "App4MC Tooling for Multicore Development". In the top right corner, there are icons for a clock and a share button, with the text "Später ansehen" and "Teilen" next to them. The main area shows a green circuit board layout with various components and traces. A video player icon is overlaid on the circuit board. On the left side, there is a white box containing the APP4MC logo. Below the logo, the text "Learn more" is followed by the URL www.eclipse.org/app4mc. At the bottom left, the Eclipse logo is partially visible.
